

INTRODUCTION

- A renewable energy certificate is a market-based instrument that represents and conveys the property rights to the environmental, social and other non- power attributes of renewable electricity generation
- RECs represent the environmental attributes of one megawatt-hour (MWh) of electricity generation
- RECs are tradeable and serve to substantiate both compliance and voluntary market claims
- RECs are tracked, transacted and retired in different RECSs tracking systems

BENEFITS

- Additional US dollar denominated revenue stream from sale of renewable energy certificates
- All upfront costs are financed by ZIM-REC , that is from registration, issuance to trading .
- ZIM-REC provides a seamless gateway to issuers of high integrity renewable energy certificates through facilitating the issuance of International Renewable Energy Certificates (I-RECS) by virtue of it being an approved registrant and participant on the Evident Registry a partner of the I-REC Standard Foundation.
- ZIM-REC has a global footprint in the RECs market leveraging through the New York Carbon & RECs trading desk of Traxys a global multibillion dollar JV partner of Silver Carbon.
- ZIM-REC also offers a number of options through Traxys to successfully registered participants these can range from long term offtake contracts structured in a way to maximize revenue and reduce counterparty risk, full or part prepayments of current and/or expected RECs production designed to provide liquidity to generators and utilizing market arbitrage, futures and options to manage market risk and increase cashflows.
- ZIM-REC has been officially endorsed by the Ministry of Energy & Power Development and is in a process of creating a domestic compliance market which will be a game changer in significantly increasing the local demand and pricing of RECs
- Being part of ZIM-REC also comes with exposure to other benefits associated with a suite of service offering from Silver Carbon and the AICTS

Associated Benefits

- Carbon asset development technical expertise to assist in the development of renewable energy carbon credits for new plants or expansion of existing plants
- Carbon offtake contracts through Traxys that will guarantee future income and enhance financial models making the risk -return models more attractive to investors
- Provision of carbon finance to qualifying projects to compliment capital raising strategies.
